## Introduction

Welcome to the **LeetCode Top 50 SQL Problems** repository. This project is a comprehensive collection of SQL solutions to help learners, job seekers, and developers strengthen their SQL skills through practical problem solving.

Each file contains clean, efficient SQL queries for real interview-level problems across various categories — from basic SELECT to complex subqueries and string manipulations using REGEXP.

This project is ideal for:

- Beginners aiming to understand foundational concepts
- Intermediate users refining their SQL logic
- Interview preparation for data-related roles (Analyst, Engineer, Scientist)

---

## Folder Structure

```
📁 LeetCode_SQL_Problems/
    ├── 📁 Select/
    ├── 📁 Basic_Joins/
    ├── 📁 Basic_Aggregate_Functions/
    ├── 📁 Sorting_and_Grouping/
    ├── 📁 Advanced_Select_and_Joins/
    ├── 📁 Subqueries/
    ├── 📁 Advanced_String_Functions_Regex_Clause/
    └── 📄 README.md
```

Each folder contains .sql files named after the corresponding LeetCode problem.

## Solutions by Category

### 1. Select

- Recyclable and Low Fat Products
- Find Customer Referee
- Big Countries
- Article Views I
- Invalid Tweets

### 2. Basic Joins

- Replace Employee ID With The Unique Identifier
- Product Sales Analysis I
- Customer Who Visited but Did Not Make Any Transactions
- Rising Temperature
- Average Time of Process per Machine
- Employee Bonus
- Students and Examinations
- Managers with at Least 5 Direct Reports
- Confirmation Rate

### 3. Basic Aggregate Functions

- Not Boring Movies
- Average Selling Price
- Project Employees I
- Percentage of Users Attended a Contest
- Queries Quality and Percentage
- Monthly Transactions I
- Immediate Food Delivery II
- Game Play Analysis IV

### 4. Sorting and Grouping

- Number of Unique Subjects Taught by Each Teacher
- User Activity for the Past 30 Days I
- Product Sales Analysis III
- Classes More Than 5 Students

- Find Followers Count
- Biggest Single Number
- Customers Who Bought All Products

## 5. Advanced Select and Joins

- The Number of Employees Which Report to Each Employee
- Primary Department for Each Employee
- Triangle Judgement
- Consecutive Numbers
- Product Price at a Given Date
- Last Person to Fit in the Bus
- Count Salary Categories

## 6. Subqueries

- Employees Whose Manager Left the Company
- Exchange Seats
- Movie Rating
- Restaurant Growth
- Friend Requests II: Who Has the Most Friends
- Investments in 2016
- Department Top Three Salaries

## 7. Advanced String Functions / Regex / Clause

- Fix Names in a Table
  - Patients With a Condition
  - Delete Duplicate Emails
  - Second Highest Salary
  - Group Sold Products By The Date
  - List the Products Ordered in a Period
  - Find Users With Valid E-Mails
-

## How to Use

### 1. Clone the Repository

```
git clone: https://github.com/ChetanyaYadav/Celebal-Internship/tree/main/Week6\_Assignment\_Celebal\_Technology/Leetcode\_Performed\_Questions
```

```
cd LeetCode_SQL_Problems
```

2. **Open in Your SQL Editor** Use any SQL engine (MySQL, PostgreSQL, SQLite, etc.) and open the files from each category.
  3. **Practice by Modifying Queries** Try tweaking the queries to understand better, run explain plans, or adapt them to your own datasets.
  4. **Cross-reference with LeetCode** Each SQL file corresponds directly to a problem on LeetCode, so you can test solutions live on the platform.
- 

## Technologies Used

- **SQL** – Core language for all queries
  - **Git** – Version control and collaboration
  - **Markdown** – For documentation
- 

## Contributing

If you find errors, improvements, or want to add more problems:

1. Fork this repo
2. Create a new branch
3. Submit a Pull Request

Your contributions are welcome!
